

Mixed Reality Training
Even illumination from edge to edge with zero glare.

Aircraft Interiors
Integrating lighting into your design has never been easier.

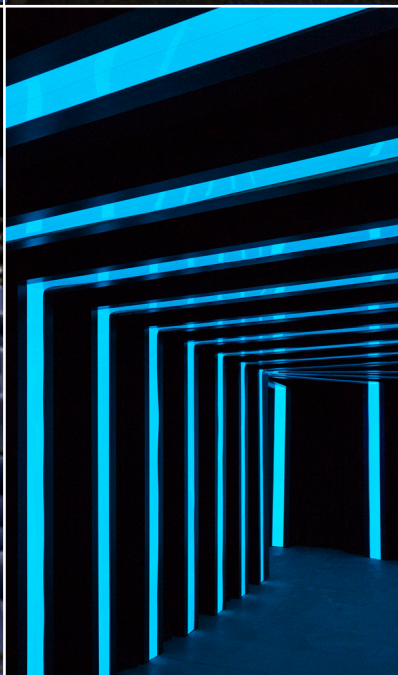

Backlighting Surfaces
Say goodbye to bulky light boxes and hotspots.

Outdoor Advertising
Billboards, Bus Shelters, Vehicle Advertising, Commercial Signage.

Stepguard™
Setting a new standard for theatre lighting systems.

Experiential
Trade shows, events, and entertainment.

OEM
Lighting components delivered in a bespoke form factor.

Signage and Wayfinding
Safety with elegance.

Prepare to be illuminated

Light Tape® employs a radically distinctive and patent-protected type of electroluminescent technology. It exists in the form of ultra-low-profile, lightweight panels and strips that seamlessly and evenly illuminate from edge to edge. The philosophy behind the product is simple: a light's form factor should not restrict design or artistic vision. With Light Tape®, you have the possibility to turn anything into light.

Even Illumination without glare
No hot spots at any size, a uniform light source without the need for diffusion or deflection.

Thin & Flexible
Thinner than a credit card and nearly a metre wide, Light Tape® can fit into any tight area and cover any surface with ease.

Custom Shapes
Illuminate non-symmetrical shapes with a uniform, ultra-thin light source. Allow your creativity to determine your lights design.

Unmatched Durability
Heavy load capable, vibration and impact resistant. Able to withstand high physical impact and still illuminate.

Energy Efficient
Light Tape® uses 40% less power than traditional LED's at equal brightness.

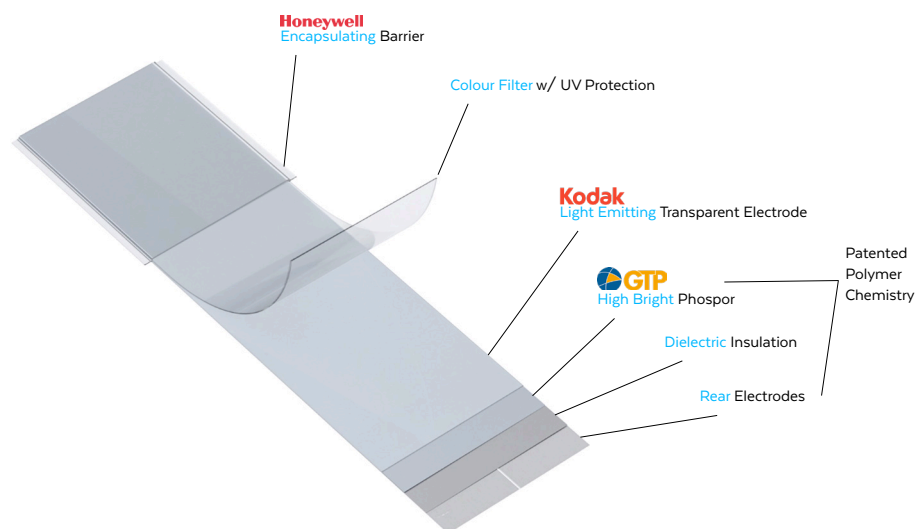

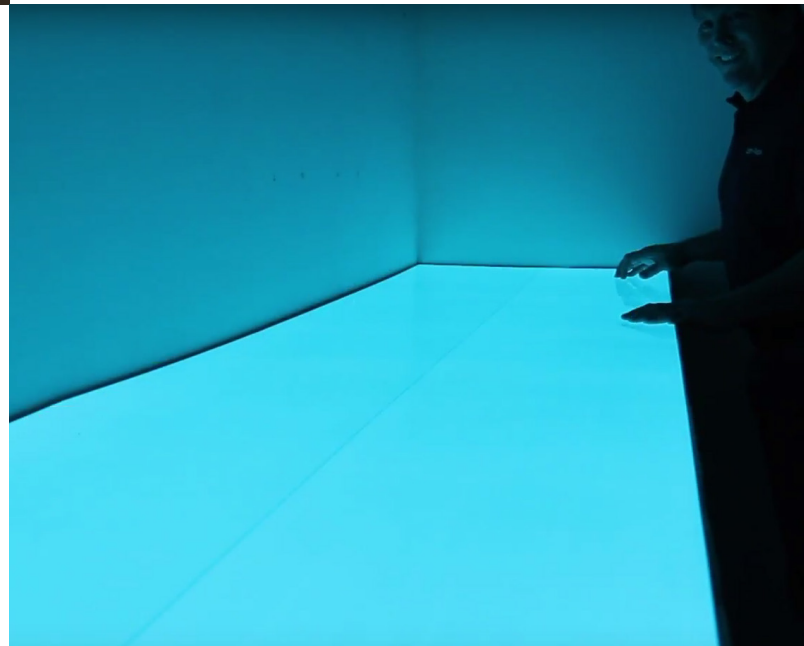

No Heat
Light Tape® produces zero heat and can operate in extreme temperatures.

Easy Installation
Large backlighting panels made to your custom dimensions. Cut your installation time by 75%.

Made In The USA
Top quality, built with pride utilising the best materials and manufactured to last.

How LightTape® Works

Our patented Light Tape® employs Electroluminescent (EL) technology. Light Tape® illuminates consistently over an entire surface area and offers a bend radius that wraps around your little finger. Only the best materials are used. It contains neither glass nor gas and generates no heat. Compared with other EL technologies, Light Tape® is over 2.5 times brighter at the same current, which translates into a longer commercial lifetime.
