

StepGuard™ Cyclops

(PN: SG™ CYCLOPS)

How to specify: SG™ Cyclops

- Measure the length of the wall to determine quantity. Plan for one Cyclops profile per meter.
- Provide a .DXF file of your logo or desired graphic for the front of the Cyclops profile.
- Choose the color for both the top and bottom lights.
- Specify either 12V or 24V LEDs for the bottom light.

SG™ Cyclops: Light Tape facing out, LEDs shining down.

The Cyclops Wall Light enhances theater entrances by combining immersive design, brand visibility, and safety. It delivers a highly visible yet cost-effective lighting solution that guides guests without distracting from the entertainment experience.

Its streamlined profile integrates two distinct light sources: a forward-facing light that supports branding or identification, and a downward-facing LED that illuminates the walkway. The adjustable downlight rotates to direct light exactly where it's needed, giving designers greater control over the environment. Installed at a recommended spacing of approximately one meter apart, Cyclops creates a cohesive, safe, and visually engaging entrance.

Description of parts
