

StepGuard™ WallGuide™

SG-WG-DL: Light Tape® Shining Down

Our WallGuide™ system is designed to be mounted on the wall to provide navigation illumination for entrance ways and stairs.

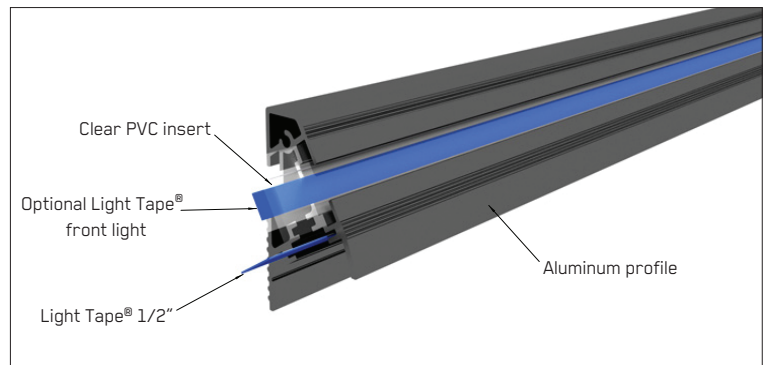

WallGuide™ with Light Tape® offers the perfect amount of light for navigation while preserving an immersive environment. With no glare or bounce off of the carpet, the viewing screen is protected from the light source. The light illuminates the floor but not the venue.

The SG™ WallGuide™ design is recommended for mounting on walls in sections. Then feeding our Light Tape® in a channel specifically designed in long lengths of continuous illumination. Light tape® face lighting is also an available option.

Design Features

- Profiles arrive in sections up to 3 meters in length.
- Illuminated by one (or two) Light Tape® EL lamp(s).
- Only one electrical connection required at beginning of profile with no termination connection at other end.
- Aluminum profile length +/- 3mm.
- Extremely energy efficient: 1/2 a watt per meter.
- Screwed into wall and then hung using rear mount channel.
- End caps as well as corner caps provided for transitions.

System and Parts

How to Order

- Part Number: SG-WG-DL
- For a basic quote, we need the total length of profile needed per entrance or stairway for us to estimate materials and power.
- We also offer a service where we will go through architectural files to determine layout and what is required for the installation.

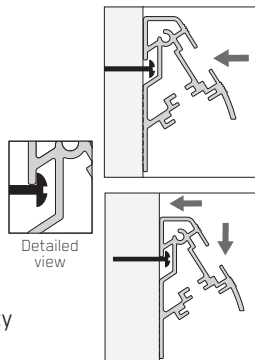

Available Colors

- No glare, completely uniform light with no heat.
- 4 1/4 watt per meter. 10% of LEDs at same brightness.
- Only 3 milliamps of current per linear meter step.

Rapid Installation

- Set length of the run, then mark and drill holes 30 cm from floor, at least 1 meter apart.
- Leave at least 3-4mm of screw head sticking out of wall surface.
- Push in and pull down the profile to lock mounting cavity onto the screws.

For step-by-step instructions, please refer to our installation manual on our website.
